

INDION® Membrane Systems

Dye Desalting, Concentration & Purification

Ion Exchange offers a wide range of membrane solutions for dye desalting, concentration and purification of the finished products for the dye industry. These include systems designed using HYDRAMEM ultra filtration (UF), reverse osmosis (RO) and nano filtration (NF) membranes. Our solutions not only improve the quality of the finished products, but also improve process efficiency, increase profitability and dispose waste efficiently.

Our advanced membrane systems are commonly applied to reactive dyes, along with other products such as sulphur, direct and acid dyes. They also find applications for food colours & pigment concentration.

Integration of dye desalting, concentration and purification process with downstream zero liquid discharge (ZLD) systems also helps in effluent treatment and importantly recovering 95-98% water.

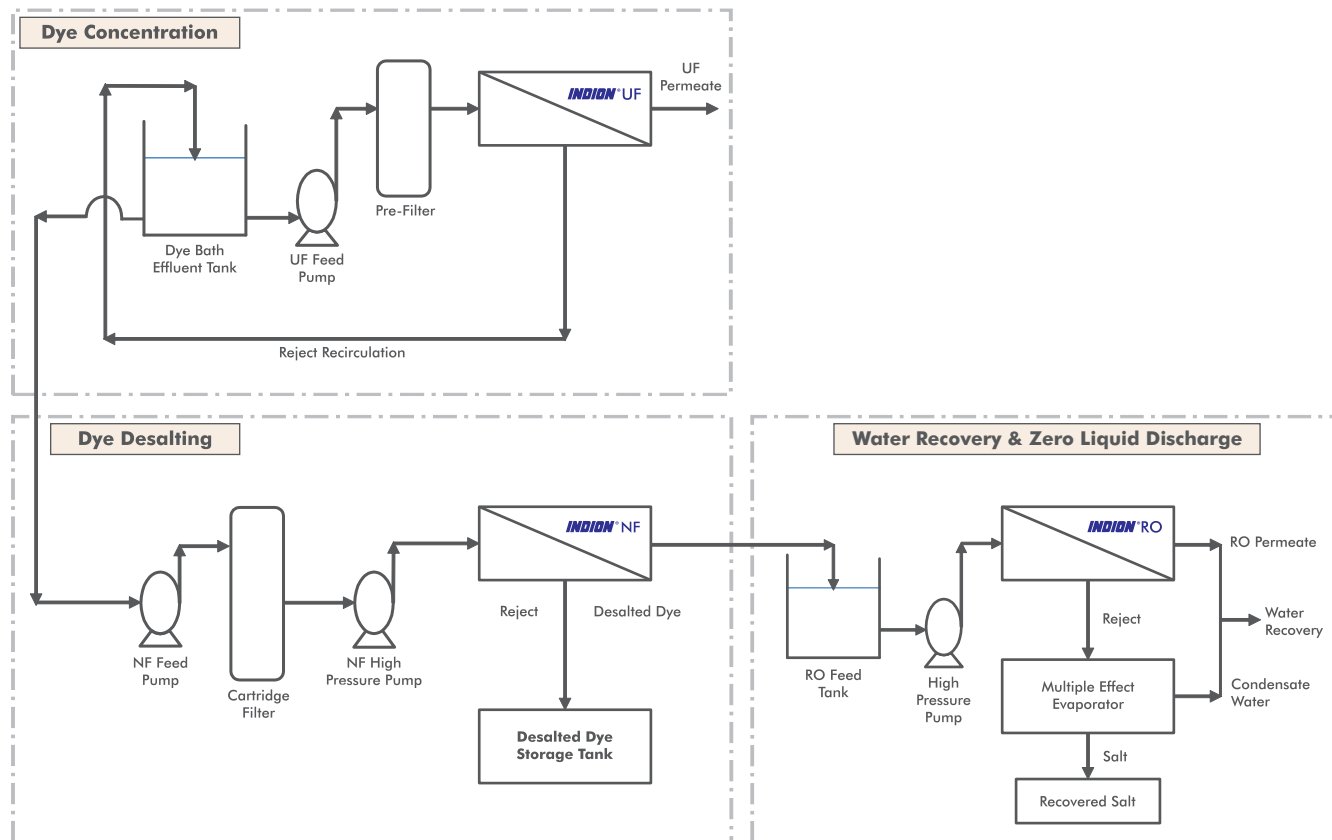

Features

- Advanced membrane filtration solution resulting in:
 - >95% desalting
 - <0.1% dye loss
 - Increased dye concentration from 5 to 30%
- Modular, skid mounted & automated systems

Benefits

- Significant improvement in product quality
- Increased yield
- Increased dryer throughput/capacity

Integrated dye desalting, concentration & water recovery system
