INDION TCI/K=0.01

RESISTIVITY SENSOR

The new INDION TCI Conductivity Sensor is used to to satisfy a broad range of applications In drinking water, ground water, food, etc.

The cell constant is a critical parameter affecting the conductance value produced by the cell and Handled by the electronic circuitry.

In order to produce a measuring signal acceptable to the meter, it is highly important that the user Chooses a cell constant appropriate for the sample. The technical specification table shows the Optimum conductivity range of cells with different cell constants.
